CBE

Satisfaction drivers

Driver 1: Intuitive UI and ease of use

15 positive UI & Design reviews (3.6% of CBE reviews).

Sample reviews:

"easy and fast"

"it's fast and easy nice"

Driver 2: Responsive customer support

11 positive Customer Support mentions (2.7% of reviews).

Sample reviews:

"i like cbe service"

"excellent service"

Driver 3: Speed and reliability

20 positive reviews cite speed/ease/reliability (4.9% of reviews).

Sample reviews:

"fast and time saving..."

"easygoing & Convenient to use."

Pain points

Pain point 1: Slow or failed transactions

25 negative Transaction Performance reviews (6.1% of reviews).

Sample reviews:

"notwork totansferto other"

"it's v good app sometimes there is a problem on other bank transfers"

Pain point 2: App crashes and instability

10 negative Stability & Crashes reviews (2.4% of reviews).

Sample reviews:

"I can't use the app months ago. It stopped working with Mobile data and WiFi. I didn't know the cause. Why this app is not compatible wit..."

"I like it but sometimes there is a system error"

Recommendations

- [P1] Invest in transfer/payment performance: add end-to-end transaction tracing, proactive push notifications on pending/failed payments, and a dedicated "payment status" screen for CBE users.

Evidence: Transaction Performance is a top negative theme in review data.

- [P1] Launch a stability sprint for CBE: crash reporting (Firebase/Crashlytics), device/OS matrix testing, and hotfix channel for force-close issues.

Evidence: Stability & Crashes appears frequently in negative reviews (esp. BOA).

- [P2] Protect CBE's UI strengths: usability testing on major flows, dark mode, and accessibility (font size, Amharic/English toggle).

Evidence: UI & Design is a documented satisfaction driver.

- [P3] Scale in-app chat and branch callback for CBE; promote support channels where positive Customer Support reviews cluster.

Evidence: Customer Support cited positively in themed reviews.

BOA

Satisfaction drivers

Driver 1: Intuitive UI and ease of use

5 positive UI & Design reviews (1.2% of BOA reviews).

Sample reviews:

"it is simple and fast app"

"fast and simple"

Driver 2: Responsive customer support

10 positive Customer Support mentions (2.3% of reviews).

Sample reviews:

"office branches have to improve their services please"

"excellent service"

Driver 3: Speed and reliability

12 positive reviews cite speed/ease/reliability (2.8% of reviews).

Sample reviews:

"fast"

"fast security ???"

Pain points

Pain point 1: Slow or failed transactions

24 negative Transaction Performance reviews (5.6% of reviews).

Sample reviews:

"i can't transfer money to other bank. ??"

"i m sorry but it doesn't work for my android it is too slow but other bank are very fast please update"

Pain point 2: App crashes and instability

25 negative Stability & Crashes reviews (5.8% of reviews).

Sample reviews:

"the app not works on samsung galaxy A06 models it's directly kick you out of the app whenever u want to use it amd and then it's says the..."

"it is not working on redminote 11 pro+ pls fix it"

Pain point 3: Login, OTP, and account access failures

9 negative Account Access Issues (2.1% of reviews).

Sample reviews:

"i entered incorrect security question by mistake boa app lock pin forever, why is there no other options? ?? i contacted different branch..."

"when i try to see my balance the app logs me out.i try to uninstall the app and install it when i try to login again it says login expire..."

Recommendations

- [P1] Invest in transfer/payment performance: add end-to-end transaction tracing, proactive push notifications on pending/failed payments, and a dedicated "payment status" screen for BOA users.

Evidence: Transaction Performance is a top negative theme in review data.

- [P1] Launch a stability sprint for BOA: crash reporting (Firebase/Crashlytics), device/OS matrix testing, and hotfix channel for force-close issues.

Evidence: Stability & Crashes appears frequently in negative reviews (esp. BOA).

- [P1] Redesign OTP/login flow for BOA: SMS fallback, clearer error messages, and in-app "resend OTP" with rate-limit transparency.

Evidence: Account Access Issues and OTP/login keywords in negative reviews.

- [P2] Protect BOA's UI strengths: usability testing on major flows, dark mode, and accessibility (font size, Amharic/English toggle).

Dashen

Satisfaction drivers

Driver 1: Intuitive UI and ease of use

40 positive UI & Design reviews (9.2% of Dashen reviews).

Sample reviews:

"easy to use, friendly"

"The Dashen Super App is very impressive. It is fast, easy to use, and provides smooth access to all essential banking services. Money tra..."

Pain point 2: App crashes and instability

5 negative Stability & Crashes reviews (1.2% of reviews).

Sample reviews:

"it is not working"

"Before the recent update, this app was great. Now, the home page is cluttered with promotions and banners, which really hurts the experie..."

Pain point 3: Login, OTP, and account access failures

8 negative Account Access Issues (1.8% of reviews).

Sample reviews:

"I am experiencing a serious issue with the Dashen Super App. I visited a branch and my account was successfully activated. However, short..."

"it takes time to login. but after login its good but sometimes unexpected termination occur in which rises untrust to use usually the app..."

Recommendations

- [P1] Invest in transfer/payment performance: add end-to-end transaction tracing, proactive push notifications on pending/failed payments, and a dedicated "payment status" screen for Dashen users.

Evidence: Transaction Performance is a top negative theme in review data.

- [P1] Launch a stability sprint for Dashen: crash reporting (Firebase/Crashlytics), device/OS matrix testing, and hotfix channel for force-close issues.

Evidence: Stability & Crashes appears frequently in negative reviews (esp. BOA).

- [P1] Redesign OTP/login flow for Dashen: SMS fallback, clearer error messages, and in-app "resend OTP" with rate-limit transparency.

Evidence: Account Access Issues and OTP/login keywords in negative reviews.

- [P2] Protect Dashen's UI strengths: usability testing on major flows, dark mode, and accessibility (font size, Amharic/English toggle).

Ethics and limitations

Negativity bias: Play Store reviewers often post after a bad experience; sentiment and themes may over-represent problems versus silent satisfied users.

English-only sentiment: Amharic and mixed-language reviews are labeled `non\_english` without a transformer score; English-only scraping (`lang=en`) under-samples Amharic feedback.

Temporal sampling: Reviews span roughly one year (scrape window); seasonal campaigns or app releases may skew theme counts.

Keyword themes: Rule-based themes miss nuance; sarcasm and context can be misclassified.

Survivorship: Users who uninstall without reviewing are invisible in this dataset.
